

-) What are the limitation? Like memory, hard space, Q5.

2) How are the emergency calls coming?

3) How are the updates of the missions coming in?

1) How do you want emergencies prioritized?

2) How do you want the missions assigned?

3) How do you want the location recorded?

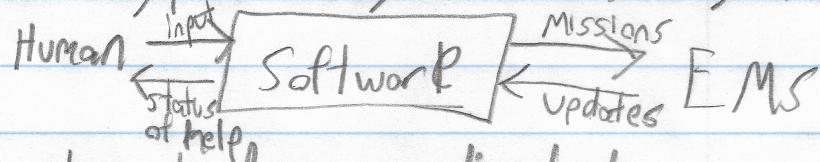

- Sounds like he wants us to coordinate the people + material

- Use resources efficiently

- Do a cluster via GPS coordinate bc of the incident

3) Send information that something is coming to the civilians via software

- Inputs: SMS, phone calls, social media, emails

- Need to have a display

- try to have a web interface

3) Get GPS from Google

- Let people volunteer so that they can help

- Give metrics of how long mission speed?
