

- Test via <sup>100</sup> users on the interface
- Responders should know what the resources
- Collect all the information (make sure nothing happens) and then analyze and give the first responders an analyzed version of the data

- Access control

- Should be up all the time

- First responders assign prioritized  
(Sounds like we need an interview w/ first responder)

- People should be able to add actions/items
- System has to have actions

- Info from users: Name, phone number, state, GPS location, Emergency
- Local system (several hundred thousands)
